

Dax Outlook Week 36

The Dax dropped last week to 8'103. The 8'200 support did not hold.

The MACD is bearish, the RSI is neutral and the VDAX has risen to 18.04.

In the coming week 36 there would be room to a contra move to last weeks drop up to 8'200. In general this level and the sideways trend is broken so we would most likely see a drop down to 8'000 points.
